Biswajit Banerjee

An Introduction to Metamaterials and Waves in Composites

CRC PRESS
Boca Raton Ann Arbor London Tokyo

Contents

Preface **v**

Introduction **vii**

1 Elastodynamics, Acoustics, and Electrodynamics **1**
1.1 A note about notation . . . 2
1.2 Elastodynamics . . . 3
1.2.1 Elastodynamic potentials . . . 6
1.2.2 Cartesian coordinates . . . 7
1.2.3 Curvilinear coordinates . . . 8
1.2.4 Anisotropic and frequency-dependent mass density . . . 9
1.2.5 Elastodynamics at a fixed frequency . . . 10
1.2.6 Antiplane shear strain . . . 13
1.2.7 Elastodynamic power and dissipation . . . 13
1.3 Acoustics . . . 16
1.3.1 Acoustic potential . . . 19
1.3.2 Cartesian and curvilinear coordinates . . . 19
1.3.3 Anisotropic and frequency-dependent mass density . . . 20
1.3.4 Acoustics at a fixed frequency . . . 21
1.3.5 Acoustic equation and antiplane shear . . . 22
1.3.6 Acoustic power and dissipation . . . 23
1.4 Electrodynamics . . . 24
1.4.1 Governing equations . . . 25
1.4.2 Electrodynamic potentials . . . 29
1.4.3 Cartesian and curvilinear coordinates . . . 31
1.4.4 A slight simplification . . . 33
1.4.5 Maxwell's equations at fixed frequency . . . 34
1.4.6 TE and TM modes in electromagnetism . . . 37
1.4.7 Maxwell's equations in elasticity form . . . 39
1.4.8 Electrodynamic power and dissipation . . . 40
1.4.9 The electrical conductivity equation . . . 41

2 Plane Waves and Interfaces **49**
2.1 Plane wave solutions . . . 50
2.2 Plane wave solutions in elastodynamics . . . 51
2.2.1 Elastodynamic potentials for plane waves . . . 53

2.2.2 Reflection of plane P-waves at a free surface 55
2.2.3 Reflection of P-waves at the interface between two solids . 60
2.2.4 Reflection of SH-waves at the interface between two solids 61
2.2.5 Negative refractive index and SH-waves 62
2.3 Plane wave solutions in acoustics 63
2.3.1 Reflection of an acoustic wave at a plane interface 64
2.3.2 Acoustic impedance 67
2.3.3 Reflection at a liquid-solid interface 68
2.3.4 Negative refractive index 70
2.4 Plane wave solutions in electrodynamics 71
2.4.1 Reflection of a plane wave at an interface 72
2.4.2 Wave polarized parallel to the plane of incidence 73
2.4.3 Wave polarized perpendicular to the plane of incidence . . 77
2.4.4 Electromagnetic impedance 79
2.4.5 Negative refractive index 80
2.5 Wave propagation through a slab 82
2.5.1 Acoustic waves in a slab 82
2.5.2 Impedance tube measurements 85
2.5.3 Electromagnetic waves in a slab 87

3 Sources and Scattering 95
3.1 Plane wave expansion of sources 95
3.1.1 Two-dimensional scalar wave equation 96
3.1.2 Three-dimensional scalar wave equation 100
3.1.3 Expansion of electromagnetic dipole sources 104
3.2 Single scattering from spheres 106
3.2.1 Scattering of acoustic waves from a liquid sphere 107
3.2.2 Acoustic scattering cross-section 110
3.2.3 Scattering by an elastic sphere in an elastic medium 112
3.2.4 Scattering of electromagnetic radiation from a sphere . . . 115
3.3 Multiple scattering 118
3.3.1 The self-consistent method 119
3.3.2 Acoustic scattering from multiple circular cylinders 122

4 Electrodynamic Metamaterials 129
4.1 A model for the permittivity of a medium 130
4.2 Negative permittivity materials 133
4.3 Artificial magnetic metamaterials 137
4.4 Negative refraction and perfect lenses 143
4.4.1 Pendry's argument 147

5 Acoustic and Elastodynamic Metamaterials 153
5.1 Dynamic mass density . . . 156
5.1.1 A simple model with negative mass . . . 156
5.1.2 Complex mass density . . . 160
5.1.3 Anisotropic mass . . . 167
5.1.4 General expression for frequency-dependent mass . . . 169
5.2 Frequency-dependent moment of inertia . . . 173
5.3 Negative elastic moduli . . . 179
5.3.1 A Helmholtz resonator model . . . 179
5.3.2 Negative moduli and viscoelasticity . . . 184
5.4 Band gaps, negative index and lenses . . . 189
5.5 Anisotropic density . . . 192
5.6 Willis materials in elastodynamics . . . 194
5.6.1 Ensemble averaging . . . 194
5.6.2 The Willis equations . . . 196
5.6.3 Derivation of the Willis equations . . . 198
5.6.4 Extension to composites with voids . . . 200
5.6.5 Willis equations for electromagnetism . . . 202
5.7 A Milton-Willis model material . . . 203
5.8 Extremal materials . . . 214
5.8.1 Pentamode materials . . . 214

6 Transformation-based Methods and Cloaking 227
6.1 Transformations . . . 228
6.2 Cloaking of electrical conductivity . . . 231
6.2.1 Coordinate transformation for electrical conductivity . . . 232
6.2.2 Electrical tomography . . . 233
6.2.3 Examples of transformation based cloaking . . . 235
6.3 Cloaking for electromagnetism . . . 235
6.3.1 The perfect lens . . . 241
6.3.2 Magnification . . . 243
6.4 Inertial acoustic cloaking . . . 244
6.4.1 The infinite mass requirement . . . 249
6.5 Transformation-based cloaking in elastodynamics . . . 251
6.5.1 Energy considerations . . . 254
6.6 Acoustic metafluids and pentamode materials . . . 255
6.6.1 A pentamode to pentamode transformation . . . 257

7 Waves in Periodic Media 265
7.1 Periodic media and the Bloch condition . . . 267
7.2 Elastodynamics in the quasistatic limit . . . 270
7.2.1 Effective stiffness and dispersion relation . . . 274
7.2.2 Hashin's relations . . . 275
7.3 Electromagnetic waves in the quasistatic Limit . . . 278
7.3.1 Effective properties and dispersion relations . . . 280

7.4 Band gap phenomena in periodic composites 282
7.4.1 One-dimensional lattice models 283
7.4.2 Two-dimensional lattice models 286
7.4.3 Dispersion in continuous elastic composites 290

8 Waves in Layered Media **299**
8.1 Wave equations in layered media 299
8.1.1 Antiplane shear elastic waves 300
8.1.2 Acoustic waves 302
8.1.3 Electromagnetic waves 303
8.2 Piecewise-constant multilayered media 305
8.3 Smoothly varying layered media 308
8.3.1 The thin layer limit 308
8.3.2 The Airy function solution 311
8.3.3 The Wentzel-Kramers-Brillouin-Jeffreys method 313
8.4 Propagator matrix approach 318
8.4.1 A three-layered sandwich medium 322
8.4.2 Anisotropic electromagnetic layered media 324
8.4.3 Anisotropic elastic layered media 325
8.5 Periodic layered media 326
8.5.1 The Schoenberg-Sen model 326
8.5.2 Low frequency effective properties 331
8.6 Quasistatic homogenization of layered media 334
8.6.1 Quasistatic effective properties of elastic laminates 334
8.6.2 Quasistatic effective properties of electromagnetic laminates 338
8.6.3 Laminates with arbitrary lamination direction 340
8.6.4 Tartar-Murat-Lurie-Cherkaev formula 342
8.6.5 Hierarchical laminates 347

Epilogue **355**
